Hiring Team
Rabobank
Netherlands

Dear Hiring Manager,

This is Tejaswini and I am excited to apply for the Junior Quantitative Analyst position within Treasury Balance Sheet Management (BSM) Early Career Program. With a Master's degree in Data Science, hands-on experience in machine learning, predictive modelling, and data analysis, I am eager to contribute to Rabobank's mission of maintaining a resilient balance sheet while developing as a quantitative professional.

During my Master's program, I completed several analytical projects that strengthened both my technical and problem-solving skills. These include a revenue optimization model for the airline industry, a loan risk prediction system using machine learning, and an automated fraud detection system leveraging Random Forest, XGBoost, and NLP. Across these projects, I gained experience in Python and SQL, developed strong analytical thinking, and learned to translate complex data into actionable insights.

What excites me most about Rabobank's Early Career Program is the opportunity to rotate across different BSM teams and gain hands-on experience in interest rate and liquidity risk management, funding strategies, and client behaviour modelling. I am particularly motivated by the program's emphasis on learning-by-doing, mentorship, and continuous development, which aligns perfectly with my eagerness to build deep expertise in quantitative analysis and balance sheet management.

I look forward to developing my skills, contributing to data-driven decision-making, and supporting Rabobank's mission of financial resilience and sustainability.

Warm Regards,
Tejaswini Sengaonkar
